

Valid for

StrataCore 3.x

OSes

RH Linux

FreeBSD

From a console connection for shutdown.

Attach a keyboard and monitor...no mouse, please.

Type the following command to halt the cache.

shutdown -h now

Hit the ENTER key.

Wait until the system halts.

Now the power can be turned off.

From a console connection for reboot.

Attach a keyboard and monitor...no mouse, please.

Type the following command to reboot the cache only.

shutdown -r now

Hit the ENTER key.

The operating system will close, reopen, and continue running normally.

From a secure Telnet connection.

The same commands, as above, can be issued from a workstation using the PuTTY application.

From a browser connection for proxy restart or reboot attempts only.

https://xxx.xxx.xxx.xxx:8443

Under Administration

Select Cache

Select Restart the Cache --to only re-initialize the proxy controller.

or

Select Reboot the System --to force a shutdown and restart of the operating system.
